d. Perform aircraft and cockpit pre-flight IAW timing outlined in SOP H-50-6. Mobile Control will complete preflight checklist up to engine start except HF radio turn on.

### e. After pilot loading:

- (1) Monitor the pilot's cockpit check and be available for assistance as required.
- (2) Confirm that the canopy is closed and latched and the seal values are on. Observe forward and center canopy latches and external indicato.

### f. After engine start:

- (1) Confirm that the seat ejection pin is pulled and the bracker is operating, if : equired.
- (2) Nomitor taxi out and check that the area overhead is clear for take-off.
- (3) Nonitor runway activity and tower channel until the pagos have been picked up and maintenance has cleared the runway, then inform the tower that runway is clear and switch to tackical frequency.
- After verifying contact on tactical frequency, the Mcbile Control Officer will retuen to the hangar and check in with the Director of Operations, Operations Officer. 25X1C

#### During the flight: g٥

25X1C

- (1) To the extent postable during training and maintenance missions. the Mobile Control Officer will be present in the Command Post except when physically manning mobile control. In no instance will the Mobile Catrol Officer leave the immediate operations area without specific approval of the Director of Operations/ Operations Officer.
- (2) During operations missions, Mobile Control Officer will not be permitted in the Command Post unless specifically granted access by the Director of Operations. He will, however, remain in the immediate vicinit to be available for consultation/advise.

### During landing phase:

(1) Be in place with the mobile control vehicle for traffic patterns and landing. Vehicle should be parked on taxiway nearest touchdown point and on side of runway opposite traffic pattern so that entire pattern may be more easily observed. Mobile must be inplace prior to energy into traffic pattern, prior to start of CCA final approach or prior to aircraft arrival at TACAN gate as appropriate for the pattern being flown.

NOTE: For TACAN/ OF or GCA low approaches, wherein the aircraft does not descend below 250 feet or published minimums, whichever is higher, mobile control will not be required to be in place by the runway, however, the mobile controller will maintain a monitor
